FULL CYCLE REPORT

Rohan Mehta

University of Bristol - BSc Economics

Target route: Goldman Sachs - Investment Banking Summer Internship

OVERALL READINESS	CURRENT POSITIONING	ARCHETYPE
57 /100	**Borderline**	**Credible but Generic**
Score after CV, commercial and numerical screens	Credible, but not yet sharp enough for IBD	The evidence is present but not yet doing enough work

MAIN DIAGNOSIS	The profile is credible, but the IBD argument is still mostly implied. Rohan has useful material - Bristol Finance Society, Tesco, and a financial modelling course - but the application does not yet frame that evidence around valuation readiness, transaction relevance or first-screen judgement.
FIRST-SCREEN RISK	A recruiter may understand the interest in banking, but not yet see enough transaction-relevant evidence to move the application forward.
LIKELY REJECTION REASON IF UNCHANGED	Credible student, but not enough visible IBD evidence.
BEFORE YOU SUBMIT	Most students only get one application per firm per cycle. If the CV undersells the evidence, you usually find out after the rejection - not before.

YOUR RESULT

How Rohan scores across the six dimensions

DIMENSION	SCORE	READ	FULL CYCLE FIX PATH
Academic Signal	68/100	Bristol Economics and a 2:1 are credible enough. Not the main blocker.	Keep clean. Do not let weaker evidence dilute the profile.
Experience Relevance	52/100	Useful material, but little direct transaction evidence.	Reframe Tesco, finance society and modelling into sharper pre-IBD evidence.
Commercial Awareness	58/100	Interest is visible, but not yet connected to deals or business logic.	Deal-note prompts and current-market briefing exercises.
Technical Readiness	66/100	4/5 technical screen suggests a base, but the CV does not show it.	IBD technical guide: EV, DCF, comps, accounting links, deal rationale.
Application Positioning	45/100	Main weakness. Reads like finance interest, not a banking argument.	Line-by-line hierarchy: lead with the strongest evidence.
Directional Clarity	54/100	Target is clear, but evidence does not yet support it strongly.	Positioning note: why IBD, why this profile, why now.

EVIDENCE CURRENTLY BEING WASTED	The financial modelling course is useful, but it is not yet tied to valuation readiness, deal analysis or transaction relevance.

MISSED OPPORTUNITY	The missed opportunity: Rohan’s financial modelling course could be much stronger if it were framed around valuation assumptions, transaction outcomes and analytical ownership.

FULL CYCLE

Let's Fix It in the Full Cycle

The Full Cycle turns the diagnosis into a pre-submission fix path. It shows which evidence to lead with, which evidence is being wasted, where the CV sounds generic, and how to strengthen the application before it goes in.

ORIGINAL	PROBLEM	REFRAMED DIRECTION
Tesco - Customer Assistant - Served customers and handled payments - Worked as part of a team - Managed stock and helped resolve customer issues	Accurate, but too generic. It gives no scale, volume, time pressure, reliability or quantified responsibility.	Tesco - Customer Assistant - Balanced 12-16 hours of part-time work per week alongside a full Economics workload. - Handled high-volume payment and customer queries during peak trading periods, requiring accuracy and calm communication. - Supported stock control and store operations across multiple weekly shifts, showing reliability under routine commercial pressure.

WHAT WE WOULD ASK ROHAN TO ADD	Exact weekly hours, number of shifts, payment/till volume if known, any stock responsibility, and any peak-period examples. The aim is not to pretend Tesco is finance. The aim is to stop wasting it as a generic job.

Two more Rohan-specific fixes

ROHAN EVIDENCE	WHY IT IS NOT WORKING YET	FULL CYCLE FIX METHOD
Financial modelling course	Rohan has the right IBD-adjacent signal, but the current wording only says he completed a course. That is too easy for a screener to ignore.	In the Full Cycle, we would ask Rohan which model he built, whether it included DCF/comps/three-statement outputs, what assumptions he changed, and what he learned about valuation sensitivity. The reviewed line would be built from his actual answers, not a generic modelling-course template.
Bristol Finance Society	The society line currently reads like attendance. For Goldman IBD, attendance is weak unless it shows follow-up, deal curiosity or transaction awareness.	In the Full Cycle, we would ask which bank sessions he attended, whether any covered M&A;/corporate finance, and which recent UK transaction he researched afterwards. The fix would connect his Bristol society evidence to a specific IBD learning path rather than a copyable “attended events” bullet.

SAMPLE METHOD	Sample shows the method, not a finished template. The Full Cycle would use Rohan’s actual course outputs, real society events, named transactions and weekly work pattern.

FULL CYCLE

Make responsibility visible with numbers

If a student has a role such as bursar, treasurer, society committee member or club officer, the review should force quantification: how much money, how many people, what process, what outcome.

WEAK VERSION	WHAT IS MISSING	STRONGER VERSION
University Football Club - Bursar Managed club finances and helped with budgeting.	Valuable, but under-used. No budget size, membership count, payments handled, process ownership or outcome.	University Football Club - Bursar - Managed annual club budget of approx. £8,000 across membership fees, kit orders, match-day costs and social events. - Tracked payments for 70+ members and maintained spending records for committee review. - Unlock more reworks in the Full Cycle.

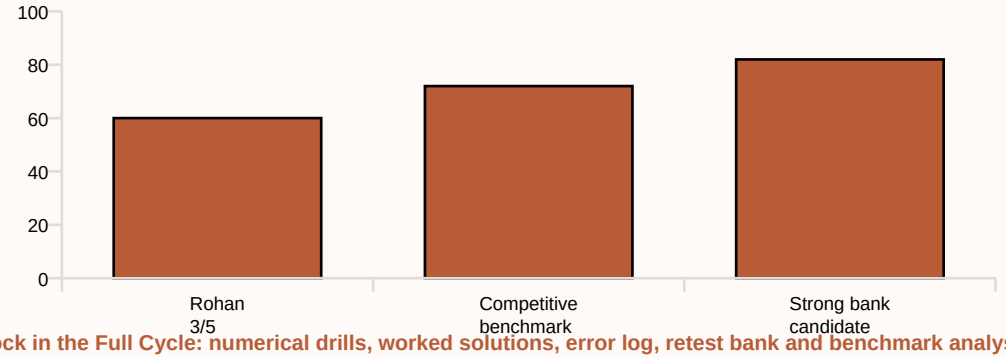
CV ITEM	CURRENT ISSUE	REVIEWED DIRECTION
Financial modelling course	Reads like passive course completion.	Completed independent modelling course, building DCF and comparable companies outputs to understand how valuation assumptions affect transaction outcomes.
Bristol Finance Society	Reads like attendance at events.	Built early IBD exposure through bank-led sessions and independent follow-up research on recent UK M&A; transactions.
CV profile	Generic “interested in finance” language.	Bristol Economics student targeting IBD, with early valuation exposure through modelling study and developing interest in UK M&A.;

NUMERACY

Numerical reasoning: what 3/5 means

Numerical reasoning benchmark

Rohan scored 3/5. The Full Cycle benchmarks this against the standard we look for before banking applications go in.



Unlock in the Full Cycle: numerical drills, worked solutions, error log, retest bank and benchmark analysis.

WHAT NUMBERS WE LOOK FOR	The Full Cycle gives access to what we look for as recruiters and market professionals. That allows us to compare candidates, benchmark performance and show analysis rather than just telling someone they were “good” or “weak”.
WHY THIS MATTERS	Banks are not looking for abstract maths genius at the first screen. They are looking for accuracy, speed and comfort with commercial numbers. A 3/5 result is fixable, but it should not be ignored before applications go in.
WHAT UNLOCKS IN THE FULL CYCLE	Numerical reasoning pack, worked solutions, finance-style data interpretation, error log, retest bank and benchmark analysis. Rohan would be pushed toward repeatable 80%+ accuracy before applying.

TECHNICAL READINESS

Technical score: decent base, still needs current answers

Technical readiness snapshot

Rohan scored 4/5. The issue is connecting knowledge to live market questions and interview-ready answers.

Unlock in the Full Cycle: current answers, market briefing, IBD guide and Zoom session.

TECHNICAL READINESS RESULT	Rohan scored 4/5 on the short technical screen. The base is decent, but the risk is sounding rehearsed or generic when asked about live markets, recent transactions or current commercial issues.
CURRENT TOPICS TO PREPARE	The Full Cycle should point students toward concepts they may actually be asked about in the current application window: inflation and rates, geopolitical oil risk, large capital-intensive companies, funding conditions, M&A; appetite and valuation pressure.
UNLOCK THE CURRENT ANSWERS IN THE FULL CYCLE	The Full Cycle unlocks current answer structures: what happened, why markets cared, which assets moved, what it means for companies, and how to discuss it without sounding like a copied news headline.
WHAT UNLOCKS IN THE FULL CYCLE	IBD technical guide, valuation primer, deal-rationale notes, daily news briefing, application guides, current-answer bank and live/recorded Zoom briefing.

FULL CYCLE

What unlocks in the Full Cycle

FULL CYCLE AREA	WHAT UNLOCKS
Reframed experience sections	Key experiences are reframed with sharper, more quantified wording. For Rohan: Tesco and the modelling / finance society evidence.
Application positioning note	A one-page route-specific note showing how the candidate should present the application for IBD.
Numerical reasoning pack	Practice questions, worked solutions, retest bank and benchmark analysis based on the MOT score.
IBD technical guide	Valuation, accounting links, EV/equity value, trading comps, DCF, deal rationale and common first-round questions.
Daily news briefing and current answers	Current-market prompts and answer structures so students can discuss recent commercial topics without sounding generic.
Application guides	Track-firm specific application guides.
Zoom briefing / workshops	Live or recorded sessions on applications and Q and A.
